AGRICULTURE AND MARINE RESOURCES			
05 IE IEEI OD68	Automated point-of-care diagnostic test platform for on-farm analysis of milk	An Irish veterinary diagnostics company is actively searching for a diagnosis test platform that will enable analysis of milk on farm. The ideal system will enable milk to be tested within a 10-minute period for each cow, with re-usable or replaceable test cartridge/sensors surface. The company is interested in assessing technologies that are on or are close to market, although they will assess appropriate technologies at prototype phase of development.	IE
AGROFOOD INDUSTRY			
05 FR FMAL OD2Z	Efficient vegetal substrates extractive technology	A French company specialised in the manufacturing of natural ingredients dedicated to cosmetics, dietetics, pharmacy or food industries is looking for an efficient vegetal substrates extractive technology, especially acid hydrolysis.	FR
05 ES NWFF OD3M	Food filleting machine	A Spanish entrepreneur is looking for a semi-automatic filleting machine for fish, meat and vegetables. It will become a part of an industrial plant for high-technology packaging of pre-cooked and fresh food with the global target of the highest safety and quality and the least or null by-products and emissions generation. The machine must cut the products into uniform strips, cubes or fillets, and include the necessary safety devices. A commercial agreement with technical assistance is sought.	ES
05 ES NWFF OD3O	Food sterilization by hot water immersion	A Spanish entrepreneur is looking for a cooking and sterilisation system for food products packaged in plastic PP or PET tray or pot by means of an autoclave with water shower or immersion. The system will become a part of an industrial plant for high-technology packaging of pre-cooked and fresh food with the global target of the highest safety and quality and the least or null by-products and emissions generation. A commercial agreement with technical assistance is sought.	ES
05 ES NWFF OD3Q	Thermosealing device for polypropylene trays	A Spanish entrepreneur is looking for a semi-automatic thermo-sealing device for PP trays for prepared food products. It will become a part of an industrial plant for high-technology packaging of pre-cooked and fresh food with the global target of the highest safety and quality and the least or null by-products and emissions generation. Trays of different sizes and shapes must be processed, bearing high temperatures and pressures. A commercial agreement with technical assistance is sought.	ES
05 DE TSEI OD49	Know-how to formulate the composition of food ingredients and additives using flavour and fragrance encapsulation	A German SME is looking for technology partners from the food industry in order to formulate the exact composition of food ingredients and food additives on the basis of encapsulation technologies.	DE
05 DE TSEI OD4P	Optimised production process regarding processing time and heat treatment to produce apple juice	A German SME is processing "organic" apples from countryside meadows to produce apple juice and apple wine on a regional basis. The enterprise wants to achieve higher-quality products and to avoid food additives and is therefore looking for a comparable enterprise to start a technology cooperation.	DE
05 SE CSMY OD7K	Tags for quality verification during handling of frozen food	A Swedish R&D and SME support institute is looking for innovative ideas and solutions for tags that can be attached to packages of frozen food. The purpose is to verify that the packages have not been exposed to temperatures exceeding a prescribed limit during the total logistic chain, from producer, freeze storage and transportation to exposure to customers in the supermarket or local shop. Partners for licensing, evaluation of new concepts or delivery of tags are of interest.	SE
BIOLOGICAL SCIENCES			
05 BE BIRC OD3I	Complementary expertise in micronutrients for research on selenium	The nuclear medicine department of a Brussels hospital developed extensive nutritional expertise in the fields of micronutrients, bone and calcium metabolism, iodine, vitamin D and selenium nutrition research. It showed an association between selenium status and bone metabolism. It looks for pharmaceutical laboratories with micronutrients expertise and financing to further investigate potential benefits of targeted increases of patients' dietary intake of selenium or vitamin D.	BE
05 FR FMMT OD2Y	Galenic Peptide Know-how for new drugs developments	A French biopharmaceutical company developing HIV (Human Immunodeficiency Virus) fusion inhibitors compounds is seeking a partner specialised in galenic peptides in order to start the clinical phase of some of its compounds. The company is interested in a technical co-operation or manufacturing agreement.	FR
05 FR FMMT OD3U	Clinical trials know-how for new drug developments	A French biopharmaceutical company developing HIV Fusion Inhibitors compounds is seeking a partner with expertise in clinical trials to start the clinical phase of some of its compounds. The company is interested in the first place in joint venture agreements.	FR
ELECTRONICS, IT AND TELECOMMS			
05 ES NWFF OD32	Web server/browser device with an integrated passive tactile screen	A Spanish SME is seeking a technology that allows to exploit the building management/automation market opportunities. This technology is intended to provide the company with a scalable, flexible, light and tactile (usable with fingers) device to be used as an interface between the building automated system and the user at home. The company is open to commercial agreements with technical assistance.	ES
05 GB EAST OD4M	Thermopile Detector technology for a new Infrared Thermometer	A leading UK manufacturer is seeking a thermopile detector for a new infrared thermometer it is developing. The technology will have a small, sensitive well-defined active area and be either field-tested or already on the market. The company is seeking evaluation samples through a technical collaboration leading to a commercial agreement with technical assistance.	GB
05 DE DSTA OD5N	Development of compact amplifier modules for EEG (electroencephalogram) devices for mobile and stationary applications	An SME from Saxony/Germany develops, produces and services devices and equipment for neurophysiologic function diagnostics, alongside the marketing of top-quality international products. The company is looking for potential partners for developing compact amplifier modules for EEG (electroencephalogram) devices for mobile application. Thereby it goes with priority about development of miniaturised of amplifier modules connecting with a small consumption of electricity.	DE
05 IT TUPT OD74	Virtual Reality Interfaces	An Italian software company seeks a partner (or partners) to provide virtual reality interface devices and expertise in their programming and application. They seek a commercial agreement with technical assistance.	IT
05 IT TUPT OD73	3D Monitors for Graphics Installation	An Italian SME, active in the areas of 2D and 3D graphic design, wishes to find a partner with expertise in specifying and using 3D monitors. They would like a commercial agreement with technical assistance.	IT

ENERGY			
05 ES NWFF OD3N	Prefabricated elements for industrial buildings with photovoltaic panel-based roofs	A Spanish entrepreneur is looking for prefabricated metal modules for the construction of an industrial plant. These modules must integrate photovoltaic panels to be placed on the roof of the building in order to produce energy for electricity and water heating. Impermeability and electrical and constructive safety must be guaranteed. The entrepreneur is open to different types of agreements.	ES
05 FR RACA OD7I	Portable device for esterification of vegetable oil in order to produce bio-diesel in a direct flow configuration	A French non-profit organisation that uses more than 900'000 litres of diesel per year is interested to finance the material part of a small factory prototype development. This device, which could be installed on using sites, will allow producing diesel from vegetable oil. The French organisation is looking for a company or a laboratory able to conduct the research and development part of the prototype and is interested in technical co-operation or joint venture agreement.	FR
INDUSTRIAL MANUFACTURE, MATERIAL AND TRANSPORT TECHNOLOGIES			
05 BG BGAR OD87	Production of new foundry products	A Bulgarian company with a long-standing tradition in the area of foundry work and in the manufacture of machines is looking for partners for the cooperation for production and strategic partnership on foreign markets for new foundry products especially in the area of pumps and hydraulic solids conveying equipment. The following types of collaboration are envisaged: joint venture for production in Bulgaria, license agreement, subcontracting.	BG
05 PL EPUB OD4W	Windowsills production technology and machinery with the use of PVC (polyvinyl chloride) waste materials	A Polish micro-firm is seeking technology and machinery for production of windowsills with the use of PVC (polyvinyl chloride) waste materials with the possibility of coating them with differently coloured marble-imitation foils. The firm is looking for an industrial or research partner. Type of collaboration sought: commercial agreement with technical assistance.	PL
05 PL EPUB OD58	Technology and machinery for trash bins production with plastic materials usage	A Polish micro-firm is seeking technology and machinery for production of trash bins with usage of plastic materials. The firm is looking for an industrial or research partner. Type of collaboration sought: commercial agreement with technical assistance.	PL
05 PL EPUB OD57	Technology for agro-stretch foil production	A Polish micro-firm is seeking technology and machinery for production of hay-silage foil. The firm is looking for an industrial or research partner. Type of collaboration sought: commercial agreement with technical assistance.	PL
05 IT LADA OD4O	Search for innovative thermo-acoustic insulator panels to be used on pleasure crafts	A small Italian company, working in the nautical sector for insulation of pleasure crafts, is looking for innovative solutions to produce thermo-acoustic panels to insulate the walls and collectors of the engine rooms.	IT
05 DE SDST OD28	MultiStick Posters and Rub-on Stickers	A German SME is seeking for partners for further technology development, machinery adoption and manufacturer of MultiStick Posters and Rub-on stickers that he has already developed, manufactured and marketed in the USA and Canada. The MultiStick posters and rub-on stickers can be stuck on various surface structures. The main problem that needs to be solved is to increase the durability of the posters and stickers against sunbeams.	DE
05 BE FLIW OD45	Self-watering system for ornamental plants	A Belgian company, specialised in production and commercialisation of ornamental indoor plants, is looking for a technical cooperation or manufacturing agreement in the field of foams, hydrogels or other polymers to develop a disk-shaped layer to regulate the water flow from a water reservoir into the flowerpot. The water flow should ideally depend on the demand of the plant in its environment. The solution must be relatively cheap; the layer should be reused several times.	BE
05 TR TAOT OD4D	A Turnkey System for Producing Socks	A Turkish company is looking for technological partners for acquiring a turnkey production facility for producing socks of different types. They are willing to build maximum capacity within his new facility with 2500 square meter closed area. They are looking for all direct and supplementary machinery/systems necessary for production. Commercial agreement with technical assistance is being sought.	TR
05 TR TAOT OD1H	New technologies in fire-resistant emergency doors	A Turkish SME, manufacturing and installing fire-fighting boards, various fire-fighting equipments and fire-resistant emergency doors, is willing to improve its production by using innovative technologies specifically in producing fire-resistant emergency doors. They are looking for companies to introduce new technologies and/or material for the production of these doors. They may discuss a commercial agreement with technical assistance and technical co-operation.	TR
05 PL EPCA OD6X	Innovative chemical liquid to prevent toners from drying out	A small Polish company in the printing field is looking for a company that would elaborate a chemical consisting of liquid that could be injected into the colour toners' snouts, and construct a machine that could use that liquid to preserve regenerated toners. The company is looking for a commercial agreement with technical assistance.	PL
05 PL EPCA OD6Z	Innovative method for ink recycling	A small Polish company in the printing field is looking for a company/institute that would make up an ink recycling method, which would let ink remaining in used toners to be reuse in a toner regeneration process. The company is looking for a commercial agreement with technical assistance.	PL
05 ES SEIF OD7G	Equipments for the quality control of magnets in food machinery	The requesting company for this technology is a provider of food machinery (canning feeder plates, pasteurisers, trippers, etc.) in Spain. They use magnets for some of their current machinery. The company is seeking easy measurement equipment to check magnet degradation.	ES
PROTECTING MAN AND ENVIRONMENT			
05 GB SCTI OD3G	Waste plastics to petrochemicals recycling process	A wholly owned UK subsidiary of a petrochemical company is seeking technology capable of converting a variety of mixed waste plastics and rubbers into liquid or gaseous hydrocarbons for further processing into new, pure petrochemical products. The best available commercial technology is sought but technologies that are at the demonstration stage will also be considered if they meet certain criteria.	GB
05 PL EPUB OD4U	Disposal and recycling of all kinds of plastic waste	A Polish micro-firm is seeking a technology for dry processing of all kinds of plastic waste. The technology should have a capacity to process up to 10 000 tons of waste a year. The firm is looking for an industrial or research partner. Type of collaboration sought: commercial agreement with technical assistance.	PL
05 GB SCTI OD7E	Technology for recycling of toner cartridges	A Scottish SME is seeking technology capable of recycling toner cartridges. It should be capable of processing a minimum of 2 tonnes of waste per day. The plant/equipment should ideally be already available on the market, however equipment demonstrated at the pilot plant stage will also be considered.	GB
