06 ES SEOT OF60	New technologies or methods for measuring table olive quality parameters	A Spanish machinery manufacturer, leader in olive inspection systems, is seeking innovative technologies for measuring table olive quality parameters. The company is interested in any kind of technology that can measure a quality aspect that is interesting for the table olive industry or the final consumer. The company wants to use these new technologies preferably in online inspection systems. The technology requested can either be at the laboratory stage or fully developed.	ES
06 DE NRXE OF9A	Mobile fruit pressing unit installed on a trailer	A German agricultural company is looking for a mobile fruit-pressing unit that can be used for producing juice from fruits, mainly apples. This facility should be placed in/on a trailer and should contain devices for milling, pressing, (gas-operated) pasteurising and filling bottles and bag-in-box packages.	DE
06 TR TEEU OFAJ	Cold Press Plant to Produce Pomegranate Seed Oil	A Turkish SME is looking for a cold press for extraction of high-quality cold-pressed oil from pomegranate seeds. The press has to be without heat treatment in order not to change the chemical structure of the oil. The company is interested in receiving offers for not only the cold press machine but also the whole manufacturing plant. The company is looking for commercial agreement with technical assistance with machine-producing companies.	TR
06 NO NONF OF58	Optimal storage of fresh berries for wine production	A small Norwegian company is going to produce wine based on wild berries. The capacity of the production plant exceeds the amount expected to be picked up per day. How should the berries be stored until full capacity is reached? Freezing - pulping - starting fermentation - pulping with sugar and freezing? They would like contact smaller winemaking industries in the same situation. The technology should be available and easy to implement. The company is looking for technical co-operation.	NO
B I O L O G I C A L S C I E N C E S			
06 GB WADA OF9J	Gas-permeable materials for use in portable blood/air exchange devices	A UK company specialising in development of portable systems for blood/air mass exchange requires materials with high permeability for oxygen and carbon dioxide. The company is seeking partners that have developed or are developing materials that allow the transfer of gases through gas-permeable membranes. The company is interested in technical co-operation and further R&D with companies and research organisations.	GB
06 GB EAST OFA3	Ambulatory medical infusion micropumps	A UK company is about to launch a novel medical device that uses a fine catheter (<1 mm) for intravascular application. The system requires fluid to be pumped through the device. Partners are sought with expertise in small pumps for medical applications. Successful prototyping will lead to potential inclusion in the recommendations for use of the new medical device. There is a potentially large hospital market for it.	GB
06 IT LAUR OFBM	Improvement of vaccination efficiency utilising the individual genomic differences in immunoglobulin (Ig) regulation	An Italian university research group wants to broaden the reliability of vaccinations in order to face up to the significant individual differences in response to vaccinations. A vaccination to a group matched to a control will be performed. The screening of the subjects for the genotype and Ig levels will confirm the difference in immune response related to the variations (polymorphism). The genotype determination gives the possibility to improve the vaccination method, giving safe protection.	IT
E L E C T R O N I C S , I T A N D T E L E C O M M S			
06 LT LTIC OF67	Flashing electronic paper displays for visual advertising of products	A Lithuanian company providing engineering services (including labelling and packaging of various products) is looking for industrial/commercial partners producing and selling flashing electronic displays ("ink-in-motion"), which could be used for visual advertisement of products.	LT
06 DE TSZP OF4Z	Data-Security of mobile devices: Encryption software for PDAs/smart phones requested	A German IT company offers various solutions for mobile applications. The company is now looking for software which improves/assures the data security for their mobile solutions and enables a safe storage of data on mobile devices. The company is looking for security software which is ready to use and that can be implemented into their existing mobile systems.	DE
06 DE TSZP OF4X	Remote Management for mobile devices	A German IT company offers various solutions for mobile applications. The company is now looking for a system which allows central remote management of mobile devices like restrict access to system components and prevent the installation of applications on the devices. The company is looking for a system which is ready to use and that can be implemented into their existing mobile systems.	DE
06 DE TSZP OF4Y	License management system for software distribution	A German IT company is looking for license management software in order to market/ distribute their software to clients via Internet. The software should allow clients to fulfil all stages of software procurement online. The requested solution should be able to handle the distribution of Java servlet applications.	DE
06 FR RAAR OF5Y	Wireless device administration system	A French software editor specialized in mobile server-side architecture is looking for a software specialist with a solution (software and hardware) editor, for monitoring and configuring remotely mobile devices. This software expert will assist the customer care and network support teams in their daily manipulation on mobile diagnostic and maintenance. License agreement with technical cooperation partner is sought.	FR
06 FI FIOU OF5Z	Certified Zigbee Protocol Stack for wireless modules	A Finnish SME is looking for an embedded Zigbee protocol stack to license in their OEM wireless modules and in engineering projects. The stack should be portable and support e.g. Texas Instruments MSP430 and 8051-based processors along with various compilers. The protocol stack would be integrated with a real-time microkernel, which would be a Zigbee Certified Platform. The implementation should be Zigbee certified, but partnership in developing portability and system integration is expected.	FI

06 FR FMCP OEXU	Global Positioning System (GPS) and Geographical Information Systems (GIS) databases	A French SME specialised in real-time 3D global Earth visualisation solutions is looking for various Global Positioning System (GPS) and Geographical Information Systems (GIS) databases to develop additional plug-ins. Partners for technical cooperation and commercial agreement are sought.	FR
06 ES MAAM OFBZ	Online tool to create very simple corporative company Web sites	A Spanish SME is looking for an on line tool to create very simple corporative Web sites. The company is seeking to offer the product to clients through the Internet, so they would license the system in order to resell it in Spain or they will sign a commercial agreement with technical assistance.	ES
06 GB SWRD OF8N	Underwater Vehicle Automation Control	A UK SME involved in the marine industry is looking for some kind of central control unit capable of pitch and yaw and working under water. At this stage a commercial agreement with technical assistance is envisaged with the potential for a long-term license agreement.	GB
ENERGY			
06 IT IRCT OF7X	Technology for capturing and trapping carbon dioxide from the tail gas of medium-scale hydrogen production steam reformer units	An Italian SME has developed a small-scale prototype plant that produces hydrogen (H ₂) exploiting methane steam reforming. The plant has a capacity range of 35-100 Nm ³ /h with H ₂ purity up to 99.95%. It can be settled inside standard containers, easily transported and installed with minimum costs. The company seeks technical cooperation/commercial agreement with technical assistance with partners owning technologies, know-how suitable to capture CO ₂ from the tail gas produced by the plant.	IT
06 GB LDLT OF62	Technical Feasibility Study of Wind Turbines	A London-based SME has developed a new design for wind turbines, and is looking for partners to explore the technical and economic feasibility of the wind energy system for the urban environment. The partner should have experience in construction and testing of wind turbines.	GB
06 IT LOCM OFAG	Lighting library: development of a tool for exploiting the potentialities of light	A team of Italian architects engaged in the fields of lighting design is looking for partners to create a "lighting library", including an analysis of experiences made in this field since the beginning of the 20th century. The aim of the project is to create an important information source, test different light effects, and disseminate research outputs and results. The team is looking for different competencies to be integrated within the project.	IT
06 CZ CZBP OF7K	Combined production of heat and electrical energy using biomass fuel	A Czech engineer's office, a working group from the area of HVAC (Heating, Ventilation, and Air-Conditioning) is searching for a combined technology for the production of heat and electrical energy utilising wood waste and willow bush grown for fuelling. The intended cooperation will be a commercial agreement with technical assistance.	CZ
INDUSTRIAL MANUFACTURE, MATERIAL AND TRANSPORT TECHNOLOGIES			
06 AT ATBE OF6B	Technology to remove burrs from polyurethane components in order to prepare them for coating	An Austrian supplier of aerodynamic kits for the automotive industry is seeking a new technology to finish polyurethane components. Depending on the used tools some PU parts need to be manually treated to reach a sufficient finish before coating. This labour-intensive process needs to be simplified and accelerated. New cutting or grinding tools, or other new ideas from research institutes and companies are sought. Any kind of collaboration will be considered.	AT
06 GB NMBT OF4R	Metal Granulation Technology	A UK-based metal granulation company is seeking a partner with existing equipment, equipment that could be adapted, specialist design input and/or the technology to produce metal powders with the correct technical requirements.	GB
06 TR TEEU OF70	New Laser Cutting System	A Turkish SME in machining sector is looking for a new laser cutting system which does highly dynamic and precise laser fine-cutting of sheet metals, shafts and 3D-workpieces. The company is seeking a commercial agreement with technical assistance.	TR
06 IE IEEI OF6L	Technology for the recovery of precious and semi-precious metals from the recycling of waste electrical and electronic material	An Irish SME, involved in recovery and recycling of waste material wishes to develop and diversify their process technology. They are seeking collaboration with an organisation which has expertise and experience in the recovery of precious and semi-precious metals from waste electrical and electronic material. This material will have already undergone fragmentation processing and will be ready for further separation and sorting, to extract valuable metals and polymers.	IE
06 FR IACC OF98	A low-cost transparent material for high-temperature applications	A French company specialised in thermal appliances manufacturing is looking for a low-cost transparent material in the form of sheets, which can accept 500°C and thermal shocks. The company is open to any form of cooperation.	FR
PROTECTING MAN AND ENVIRONMENT			
06 FR GECB OETS	Added-value technologies and applications sought for oak wood production waste management	A French SME manufacturing oak tree furniture is facing the problem of wood waste management. It's looking for partners willing to provide added-value applications and related processing technologies to eliminate these wastes.	FR
06 ES MAAH OF4N	Ultraviolet LED to disinfect wastewater	A Spanish SME a company with more than 12 years experience in the lighting sector is looking for an ultraviolet LED (Light Emitting Diode) to disinfect the water in sewers, which offers the best possible quality results in a highly cost-effective way, through the use of ultraviolet light. This method takes advantage of the natural disinfection powers of group C ultraviolet rays. The company is looking for an agreement with technical assistance.	ES
06 BE FLIW OF9E	Using saline crops to develop sustainable solutions to a range of environmental issues	A Belgian company specialised in breeding and cultivation of saline crops is looking for partners with environmental project expertise to explore the use of these crops for phytostabilisation/remediation of soils, saline wastewaters, etc. They are open to all kinds of technical collaboration and eventually to creation of a joint venture.	BE
